# Aim:

Write a java program to demonstrate operator precedence and associativity Source Code:

```
OperatorPrecedence.java
import java.util.Scanner;
class OperatorPrecedence
        public static void main(String args[])
                int x,result;
               Scanner sc = new Scanner(System.in);
               System.out.print("Enter a num: ");
                x=sc.nextInt();
               result=x++ + x++ * --x / x++ - --x + 3 >> 1 | 2;
               System.out.println("The operation going is x++ + x++ * --x / x++ --
-x + 3 >> 1 | 2");
               System.out.println("result = "+result);
        }
}
```

# Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter a num:
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 \mid 2
result = 3
```

```
Test Case - 2
User Output
Enter a num:
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 \mid 2
result = 2
```

# Aim:

write a java program that uses if-else control statement and print the result Source Code:

```
Control.java
import java .util.*;
public class Control
        public static void main(String args[])
                int x,y;
                Scanner obj = new Scanner(System.in);
                System.out.print("Enter first num : ");
                x = obj.nextInt();
               System.out.print("Enter second num : ");
                y=obj.nextInt();
                if(x+y<20)
               System.out.println("x + y is less than 20");
                System.out.println("x + y is greater than 20");
        }
```

# Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter first num :
Enter second num :
x + y is less than 20
```

```
Test Case - 2
User Output
Enter first num :
Enter second num :
10
x + y is greater than 20
```

## Aim:

Write Java program on use of Inheritance.

Create a classVehicle

- contains the data members **color** of String type and **speed** and **size** of integer data type.
- write a method**setVehicleAttributes()**to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data membersccandgearsofintegerdata type
- write a methodsetCarAttributes() to initialize the data members
- write a method display Car Attributes () which will display all the attributes.

Write another class InheritanceDemo with **main()** it receives five arguments **color**, **speed**, **size**, **cc** and **gears**. **Source Code:** 

InheritanceDemo.java

```
import java.util.*;
class Vehicle{
        String color;
        int speed,size;
        void setVehicleAttributes(String c,String sp,String s)
                color=c;
                size=Integer.parseInt(s);
                speed=Integer.parseInt(sp);
}
class Car extends Vehicle
        int cc,gears;
        void setCarAttributes(String c,String sp,String s,String cce,String gear)
        {
                setVehicleAttributes(c,sp,s);
                cc=Integer.parseInt(cce);
                gears=Integer.parseInt(gear);
        void displayCarAttributes()
                System.out.println("Color of Car : "+color);
                System.out.println("Speed of Car : "+speed);
                System.out.println("Size of Car : "+size);
                System.out.println("CC of Car : "+cc);
                System.out.println("No of gears of Car : "+gears);
        }
class InheritanceDemo
        public static void main(String args[])
                Car s=new Car();
                s.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
                s.displayCarAttributes();
        }
}
```

# Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Color of Car : Blue
Speed of Car : 100

Size of Car : 20

CC of Car : 1000

No of gears of Car : 5
```

Test Case - 2

User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

Exp. Name: write a java program to prevent inheritance using abstract class.

Date: 2023-09-15

## Aim:

write a java program to prevent inheritance using abstract class.

- · Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method **draw** which prints **drawing rectangle**
- Create another class circle1 which extends Shape
- · Class circle1 contains a method draw which prints drawing circle
- Create a main class TestAbstraction1
- · Create object for the class circle1 and called the method draw

## Source Code:

```
TestAbstraction1.java
abstract class Shape
        abstract void draw();
}
class rectangele extends Shape
{
        void draw()
                System.out.println("drawing rectangle");
class Circle1 extends Shape
        void draw()
                System.out.println("drawing circle");
class TestAbstraction1
        public static void main(String args[])
                Circle1 s=new Circle1();
                s.draw();
}
```

# Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
drawing circle
```

ID: 224G1A05B7 Page No: 19

# Aim:

write a program on dynamic binding Source Code:

```
Demo.java
class Human{
        public void walk()
                System.out.println("Human walks");
}
class Demo extends Human
{
        public void walk()
                System.out.println("Boy walks");
        public static void main(String args[])
                Human obj1=new Demo();
                Human obj2=new Human();
                obj1.walk();
                obj2.walk();
        }
```

# Execution Results - All test cases have succeeded!

Test Case - 1				
User Output				
Boy walks				
Human walks				

**ID: 224G1A05B7** Page No: 20

Date: 2023-09-15

## Aim:

Write a program on method overloading Source Code:

```
Sample.java
```

```
class DisplayOverloading
        void display(char c)
        {
                System.out.println(c);
        }
        void display(char c,int num)
                System.out.println(c+" "+num);
}
class Sample
        public static void main(String args[])
                DisplayOverloading obj=new DisplayOverloading();
                obj.display('a');
                obj.display('a',10);
```

# Execution Results - All test cases have succeeded!

Test Case - 1						
User Output						
a						
a 10						

ID: 224G1A05B7 Page No: 21

Date: 2023-09-15

# Aim:

Write a program on method overriding Source Code:

# Bike.java

```
class Vehicle
{
        void run()
                System.out.println("Bike");
}
class vehicle2 extends Vehicle
{
        void run()
                System.out.println("Bike is running");
 }
class Bike extends vehicle2
        void run()
                System.out.println("Bike is running safely");
        public static void main(String args[])
                Bike b=new Bike();
                b.run();
 }
```

# Execution Results - All test cases have succeeded!

# Test Case - 1 **User Output** Bike is running safely

ID: 224G1A05B7 Page No: 22

#### Aim:

Write a Java program that implements an interface.

 $\label{thm:conditions} \textbf{Create an interface called $$\operatorname{Car}$ with two abstract methods $$\operatorname{String getName}()$ and $$\inf$ getMaxSpeed()$.}$ Also declare one **default** method void applyBreak() which has the code snippet System.out.println("Applying break on " + getName());

```
In the same interface include a static method (Car getFastestCar(Car car1, Car car2)), which returns car1
if the maxSpeed of car1 is greater than or equal to that of car2, else should return car2.
```

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Create a **public** class called MainApp with the **main()** method.

Take the input from the command line arguments. Create objects for the classes BMW and Audi then print the fastest car.

#### Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These default methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a default method in an interface :

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, Java 8 also introduced static methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an interface:

```
public static void methodName() {
    System.out.println("This is a static method in interface");
```

S.No: 24 Fig	p. Name: <i>program to create a super class called</i> gure that it returns the area of a rectangle and angle	Date: 2023-09-15
--------------	---	------------------

# Aim:

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

# Source Code:

AbstractAreas.java

ID: 224G1A05B7 Page No: 42

```
import java.util.*;
abstract class Figure
{
        double dim1;
        double dim2;
        double dim3;
        double dim4;
        Figure(double a,double b)
        {
                dim1=a;
                dim2=b;
                dim3=a;
                dim4=b;
        abstract void area();
class Rectangle extends Figure
{
        Rectangle(double a,double b)
                super(a,b);
        }
        void area()
        {
                double Area=dim1*dim2;
                System.out.println("Rectangle:");
                System.out.println("Area is "+Area);
class Triangle extends Figure
{
        Triangle(double a,double b)
                super(a,b);
        }
        void area()
        {
                double Area=(dim3*dim4)/2;
                System.out.println("Triangle:");
                System.out.println("Area is "+Area);
}
class AbstractAreas
        public static void main(String args[])
                System.out.println("Enter lenght and breadth of Rectangle :");
                Scanner input = new Scanner(System.in);
                double dim1=input.nextDouble();
                double dim2=input.nextDouble();
                System.out.println("Enter height and side of Triangle :");
                Scanner input1 = new Scanner(System.in);

S.No: 25 Exp. Name: *Write a Java program demonstrating the usage of Threads*Date: 2023-09-15

## Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the <u>Printer</u> class which implements <u>Runnable</u> interface to take three arguments: **message**, **delay** and <u>count</u> of types **String**, **int** and **int** respectively.

Write code in the <a>Printer.run()</a> method to print the <a>message</a> with appropriate <a>delay</a> and for number of times mentioned in <a>count</a>.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call [Thread.sleep(2000);] as the [Thread.sleep(...)] method takes milliseconds as argument.]

**Note:** Please don't change the package name. **Source Code:** 

q11349/ThreadDemo.java

ID: 224G1A05B7 Page No: 45

```
package q11349;
public class ThreadDemo {
public static void main(String[] args) throws Exception {
Thread t1 = new Thread(new Printer("Good morning", 1, 2));
Thread t2 = new Thread(new Printer("Hello", 1, 2));
Thread t3 = new Thread(new Printer("Welcome", 3, 1));
t1.start();
t2.start();
t3.start();
t1.join();
t2.join();
t3.join();
System.out.println("All the three threads t1, t2 and t3 have completed execution.");
}
class Printer implements Runnable {
String message;
int deplay,count;
Printer(String a,int b,int c)
message=a;
deplay=b;
count=c;
public void run()
for(int i=0;i<count;i++)</pre>
System.out.println(message);
{
Thread.sleep(deplay*1000);
}
catch(InterruptedException ie)
System.out.println(ie);
}
}
}
}
```

Test Case - 1		
User Output		
Good morning		
Hello		
Welcome		
Good morning		
Hello		
All the three threads t1, t2 and t3 have completed execution.

Exp. Name: Create multiple threads to access the contents of a stack

Date: 2023-09-15

## Aim:

S.No: 29

Create multiple threads to access the contents of a stack. Synchronize thread to prevent simultaneous access to push and pop operations.

Note: Please don't change the package name.

### Source Code:

}

```
q29795/StackThreads.java
package q29795;
import java.util.*;
class NewThread implements Runnable
{
Thread t;
int n;
Stack<Integer> STACK=new Stack<Integer>();
NewThread(int size)
n=size;
t=new Thread(this);
t.start();
synchronized public void run()
STACK.push(n);
System.out.println(STACK.pop());
}
class StackThreads
public static void main(String args[])
System.out.println("Enter the size of the stack");
Scanner sc=new Scanner(System.in);
int k=sc.nextInt();
for(int i=1;i<=k;i++)
NewThread ob=new NewThread(i);
}
}
```

# Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Enter the size of the stack
```
